

## RS & RT

### RIDUTTORI A VITE SENZA FINE WORM GEARBOXES

#### RS & RT Riduttori a vite senza fine

Singola, precoppia e doppia  
riduzione

- 7 grandezze RT
- 9 grandezze RS
- Potenze da 0.09 a 15 kW
- Rapporti da 5:1 a 10000:1
- Coppie da 8 a 3020 Nm  
(con entrata 1400 min<sup>-1</sup>)

#### RS & RT Worm speed reducers

Single, attachment and double  
stage

- 7 sizes RT
- 9 sizes RS
- Powers from 0.09 to 15 kW
- Ratios from 5:1 to 10000:1
- Torques from 8 to 3020 Nm  
(with 1400 rpm input)

#### RS & RT Schnecken- getriebe

Ein-, vor- u.  
zweistufig

- 7 Größen RT
- 9 Größen RS
- Leistungen von 0.09 bis 15 kW
- Untersetzungen von 5:1 bis  
10000:1
- Ausgangsdrehmoment von 8  
bis 3020 Nm

## RS & RT

RIDUTTORI SERIE RS E RT  
GEARBOXES SERIES RS AND RT  
GETRIEBEBAUREIHE RS U. RT

### Vite senza fine singolo

I riduttori delle serie RS e RT, specificamente concepiti per fissaggio universale, sono costruiti con carcassa e coperchi in alluminio pressofuso fino alla grandezza 85 e in ghisa dalla grandezza 110.

Le coppie indicate nelle tabelle di selezione sono coppie di uscita relative alla grandezza conzionata e le potenze sono riferite a 1440 min<sup>-1</sup>.

I paraolio entrata in Viton, montati su richiesta, rendono possibili senza problemi gli azionamenti con motori a 2 poli o motori c.c. a 3000 min<sup>-1</sup>.

I riduttori sono spediti già riempiti con lubrificante sintetico a lunga durata (senza tappi), nelle quantità indicate a pag. 6 e valide per qualunque posizione di funzionamento.

I valori delle tabelle di selezione sono intesi per fattore di servizio FS1.0, vale a dire con funzionamento di 8-10 ore al giorno, con carico uniforme, avviamenti inferiori a 6 all'ora e temperatura ambiente fra 15 e 35 °C.

### Vite senza fine con precoppia

I riduttori delle serie RA e TA, composti da un riduttore FXA indipendente a una coppia di ingranaggi montato su un riduttore standard del tipo FRS o FRT, forniscono una maggior coppia di uscita ed un più elevato rendimento degli equivalenti rapporti del tipo RT.

### Vite senza fine - doppio stadio

I riduttori della serie RS/RS e RT/RT sono composti di due riduttori della serie RS o RT e forniscono un'ampia scelta di elevati rapporti a completamento della serie RA e TA per ottenere rotazioni alle più basse velocità.

### AS, AD - Albero di uscita

Tutti i tipi di riduttori sono normalmente costruiti con albero uscita cavo e, a richiesta, l'albero lento sporgente in acciaio C43 può essere fornito semplice AS o doppio AD. Su richiesta è disponibile una protezione di sicurezza ASC dell'estremità non utilizzata dell'albero AS.

### Braccio di reazione

I riduttori standard sono forniti normalmente su entrambi i lati con coperchi che permettono il fissaggio del braccio di reazione, quando essi debbono funzionare come riduttori pendolari. Il braccio reazione, standard o con boccia antivibrante in Vulkollan, è costruito in lamiera ad elevato spessore e zincato bianco.

### Single worm gears

The worm gearboxes, RS and RT series, specifically designed for universal mounting, are manufactured with die cast housings and covers in aluminium up to the size 85 and cast iron from the size 110.

Torques listed in selection tables are output torque values for the specific size, and motor powers are always referred to 1440 rpm.

Input Viton oil seals, fitted on demand, allow free-trouble operation with 2-pole standard ac motors or 3000 rpm dc motors.

Gearboxes are delivered filled with synthetic long-life oil (without plugs), in quantities as recommended on page 6, and valid for all mounting positions.

Selection table data are intended for service factor SF1.0 i.e. 8-10 running hours per day, uniform load, less than 6 start/stops per hour, and room temperature ranging from 15 to 35 °C.

### Helical worm gears

The gearboxes, RA and TA series, made up of an independent single stage helical gearbox FXA fitted to a standard FRS or FTR gearbox, allow greater output torques and higher efficiency than the FRS and FRT gearbox with equivalent ratios.

### Two stage worm gears

The gearboxes, RS/RS and RT/RT series, are made up of two gearboxes RS or RT and offer a full selection of high reduction ratios to obtain the very low output speeds.

### AS, AD - Output shafts

All the gearboxes are manufactured with hollow output shaft as standard version and, optionally, a single AS or double AD solid output shaft - made of steel C43 - can be supplied.

An ASC safety shield for the opposite side of a single output shaft AS, is available on demand.

### Torque arms

Standard gearboxes are supplied normally with covers on each side allowing torque arm fixing when gearboxes have to operate as shaft mounted units.

The torque arm, standard or with Vulkollan vibration-damping, is made of extra thick plate and white galvanized.

### Einstufig Schneckenge triebe

Die Getriebe der Serien RS u. RT, eigens für die universelle Montageanordnung entwickelt, haben bis zur Baugröße 85 Gehäuse und Deckel aus Aluminium-Druckguß und aus Guß bei Baugröße 110. Die in den Auswahl tabellen genannten Drehmomente sind jeweils die Ausgangsdrehmomente der entsprechenden Baugröße, und die Leistungen beziehen sich auf eine Nenndrehzahl von 1440 1/min. Wellendichtringe aus Viton, auf Anfrage auf der Eingangsseite montiert, ermöglichen einen problemlosen Einsatz von 2-poligen Motoren oder Gleichstrommotoren bis 3000 1/min im Dauerbetrieb. Die Getriebe werden ausgeliefert mit Langzeitschmier-mittelfüllung (ohne zusätzliche Verschlus-schrauben) und sind für alle Montagepositionen ausreichend befüllt. Die Tabellenwerte berücksichtigen einen Betriebsfaktor von FS 1.0, d.h. Betrieb 8-10 Stunden/Tag, gleichmäßige Belastung, weniger als 6 Schaltvorgängen (Start und Halt) je Stunde und Umgebungstemperaturen zwischen 15 und 35 °C.

### Schneckenge triebe mit Stirnradvorstufe

Die Getriebe der Serien RA u. TA, bestehen aus einer Kombination eines separaten einstufigen Stirnradgetriebes FXA, mit einem Standard FRS oder FRT Schneckenge triebe und erlauben ein größeres Abtriebsdrehmoment bei besserem Wirkungsgrad als einstufige FRS u. FRT- Schneckenge triebe mit gleicher Übersetzung.

### Doppelstufige Schneckenge triebe

Die Getriebe der Serie RS/RS u. RT/RT sind eine Kombination zweier Schneckenge triebe der RS oder RT Baureihe und bieten eine weitgehende Auswahlmöglichkeit an hohen Untersetzungen und somit sehr kleinen Abtriebsdrehzahlen.

### AS, AD - Ausgangswelle

Alle Getriebe werden in Hohlwellen-Ausführung hergestellt. Als Zubehör können Einsteckwellen in der Version AS als einseitige Welle oder AD als beidseitige Welle geliefert werden. Diese Einsteckwellen sind aus C43 Stahl gefertigt. Auf Anfrage ist auch ein Wellenschutz ASC als Abdeckung eines Hohlwellenendes lieferbar.

### Drehmomentstütze

Die Getriebe werden normalerweise mit Deckeln auf beiden Abtriebsseiten geliefert, die Bohrungen und Zentrierung für die Befestigung einer Drehmomentstütze besitzen, wenn das Getriebe in der Aufsteckversion eingesetzt wird. Die Drehmomentstütze, standard oder mit Dämpfungsbuchse aus Vulkollan, ist aus starkem verzinkten Blech hergestellt.

# RS & RT

## RIDUTTORI SERIE RS E RT GEARBOXES SERIES RS AND RT GETRIEBEBAUREIHE RS U. RT

### TLI/TLE - Limitatore di coppia

Il dispositivo limitatore di coppia - TLI realizzato all'interno del riduttore e TLE installabile esternamente - permette la regolazione della coppia trasmissibile, la protezione del motoriduttore in caso d'ostacolo accidentale, il semplice sblocco del sistema e la manovra manuale in caso di mancanza di corrente. Il valore della coppia di slittamento, tarato in fabbrica, è regolabile in diminuzione dal valore di coppia massima a zero e la rotazione dell'albero di uscita riprende quando la coppia ridiscende al disotto del valore prefissato. Le quantità d'olio del limitatore TLI sono riportate a pagina 32 e 40.

### SL - Limitatore di giri

Il dispositivo SL arresta - per mezzo di fine corsa interni - il funzionamento del motoriduttore dopo un tempo prefissato. La filettatura standard permette circa 40 giri dell'albero di uscita. L'escursione dei fine corsa è regolabile e il tempo di funzionamento varia da 12 a 170 secondi in relazione al rapporto utilizzato.

### TLI/TLE - Torque limiters

The torque limiter and safeguard device - TLI built-in inside the gearbox and TLE fitted outside - allows easy torque adjustments, full gearbox safeguard against unexpected overload conditions, simple hand release, and manual operation in case of power supply failure. Slipping torque, factory preset, can be adjusted from the maximum pre-set torque down to zero, and shaft rotation restarts automatically as soon as torque value is lower than the pre-set value. Oil quantity of torque limiter TLI are listed at page 32 and 40.

### SL - Travel limiters

The SL travel limiter device stops - by means of built-in limit switches - the gearbox after a given operation time. Standard thread allows approx. 40 turns of the output shaft. Limit switch travel is adjustable and operation time varies upon the used reduction ratio from min. 12 to max. 170 seconds.

### TLI/TLE- Drehmomentbegrenzer

Die TL Einrichtung ermöglicht die Einstellung der übertragbaren Drehmomente, die Absicherung vom Getriebe gegen Spitzenbelastungen, die einfache Ausschaltung der Antriebseinheit und die manuelle Bedienung im Falle eines Stromausfalles. Das Rutschmoment ist vom max. Einstellmoment bis zum Nullwert einstellbar und die Drehbewegung der Abtriebswelle setzt wieder ein, sobald das Drehmoment wieder kleiner als das eingestellte Moment wird. Ölmenge: Seite 32 u. 40

### SL-Drehzahlbegrenzer

Die SL-Einrichtung stoppt, mittels eingebauten Wegschalter, das Getriebe nach einer bestimmten Zeit. Die Standardgewindespindel, ermöglicht ca. 40 Umdrehungen der Ausgangswelle. Die Wegschalter sind einstellbar und die Betriebszeit ist, abhängig von der Untersetzung, zwischen min. 12" bis max. 170".

### Direttiva ATEX

I riduttori serie RS-RT ATEX, fornibili su richiesta, sono progettati e costruiti in accordo alla Direttiva 94/9/CE "Atex" e sono pertanto idonei alla installazione in atmosfere potenzialmente esplosive:

- Zone di Gruppo II,
- Categoria 2 (o 3),
- Pericolo di esplosione in presenza di Gas (Zona 1 o 2),
- Pericolo di esplosione in presenza di Polveri combustibili (Zona 21 o 22).

La serie ATEX viene identificata mediante la marcatura supplementare

**II 2 GD ck IP66 T<sub>max</sub>=135 °C**

### Directive ATEX

The gearboxes RS-RT - ATEX, delivered on demand, are designed and manufactured according to Directive 94/9/CE "Atex" and therefore, they are qualified for installation in potentially explosive atmospheres:

- Zones of Group II,
- Category 2 (or 3),
- Explosion hazard with gas presence (Zone 1 or 2),
- Explosion hazard with combustible dust presence (Zone 21 or 22).

The units ATEX are identified by the additional marking

**II 2 GD ck IP66 T<sub>max</sub>=135 °C**

### ATEX Richtlinien

Die Getriebe RS-RT Atex, ausschließlich auf Anfrage geliefert, sind entsprechend den Atex-Richtlinien 94/9/ EG "ATEX" konstruiert und hergestellt und somit zugelassen für die Installation in potentiell zündfähigen Atmosphäre:

- Gefahrenbereiche der Gruppe II
- Kategorie 2 (oder 3)
- Explosionsgefährdeter Bereich mit Gase (Gefahrenbereiche 1 oder 2)
- Explosionsgefährdeter Bereich mit zündfähigen Stäube (Gefahrenbereiche 21 oder 22).

Die Atex Produkte sind mit folgenden zusätzlichen Stempelung versehen:

**II 2 GD ck IP66 T<sub>max</sub>=135 °C**

### REVERSIBILITÀ E IRREVERSIBILITÀ BACK-DRIVING AND SELF-LOCKING UMKEHRBARKEIT UND SELBSTHEMMUNG

Azionando al contrario un riduttore a vite senza fine con la ruota come organo motore, il rendimento è inferiore a quello di un azionamento con vite motrice e, agendo sui dati di progetto, il rendimento può essere ridotto a zero, ottenendo l'irreversibilità dell'ingranamento,

In quest'azionamento al contrario, l'attrito interno tende a bloccare l'ingranamento e, quanto maggior coppia è applicata alla ruota motrice, tanto più l'attrito d'ingranamento aumenta proporzionalmente ostacolando la rotazione,

L'esempio più ovvio è dato dalla frenatura o dall'abbassamento del carico per inerzia, dove la coppia esterna azionerà al contrario la vite,

Un riduttore a vite senza fine è considerato irreversibile quando l'angolo d'elica è inferiore all'angolo d'attrito (arcotangente del coefficiente d'attrito),

Il contatto sulla dentatura è dinamico anche quando la velocità d'ingranamento è zero, in quanto le vibrazioni su un ingranaggio non rotante possono originare il moto nella zona di contatto,

Si consiglia come fattore di sicurezza la scelta di un angolo d'elica di 3° quale condizione di massima irreversibilità e di 10° quale condizione di minima irreversibilità, secondo la tabella delle relazioni fra angolo d'elica ed irreversibilità,

When back-driving a worm gear set using the worm wheel as input, the efficiency is lower than forward-driving and, by varying the design data, back-drive efficiency can be reduced to zero obtaining a self-locking, or irreversible, gear set,

When back-driving the worm gear, internal friction tends to lock the mesh, and the bigger the applied torque is, the more mesh friction increases proportionally augmenting the lockage at the same time,

The most obvious example is during braking or slowing-down where the inertial load will try to back-drive the worm shaft,

A worm gear is intended as a self-locking unit when the lead angle is less than the friction angle (arc tangent of friction coefficient),

Tooth contact is dynamic even when the mesh velocity is zero, as vibrations in a non-rotating gear set can induce motion in the tooth contact,

To provide a safety factor, a 3° lead angle is recommended for full self-locking condition, and 10° lead angle for poor self-locking condition, according to the table of relations between lead angles and self-locking,

Wird das Schneckengetriebe über die Abtriebswelle angetrieben, ist der Wirkungsgrad des Getriebes schlechter als bei Antrieb über die Eingangswelle. Dabei kann in Abhängigkeit von der Verzahnung der Wirkungsgrad bis Null reduziert sein, was eine auftretende Selbsthemmung bis hin zur vollständigen Blockierung zur Folge hat,

Dieser Fall kann beispielsweise bei Abbremsung oder Senkung einer Last auftreten, wenn die Abtriebswelle durch die Last angetrieben wird,

Ein Schneckengetriebe wird als selbsthemmend bezeichnet, wenn der Spiralwinkel kleiner ist als der Reibungswinkel (Arkustangens vom Reibungskoeffizient),

Der Verzahnungseingriff ist dynamisch, auch wenn die Eingriffsgeschwindigkeit Null ist, da Vibrationen auf ein nicht drehendes Rad eine Bewegung hervorrufen können,

Empfohlen wird, als Sicherheitsfaktor, die Wahl eines Spiralwinkels von 3° als Bedingung einer maximalen Selbsthemmung und von 10° als Bedingung einer geringen Selbsthemmung, wie aus der folgenden Tabelle ersichtlich wird,

Elica Lead angle Spiralwinkel	Irreversibilità	Self-locking	Selbsthemmung
$\beta > 20^\circ$	Reversibilità piena	Full reversibility	Volle Umkehrbarkeit
$10^\circ < \beta < 20^\circ$	Reversibilità elevata	High reversibility	Hohe Umkehrbarkeit
$5^\circ < \beta < 10^\circ$	Reversibilità buona Irreversibilità scarsa	Good reversibility Poor self-locking	Gute Umkehrbarkeit Schwache Selbsthemmung
$3^\circ < \beta < 5^\circ$	Reversibilità scarsa Irreversibilità buona	Poor reversibility Good self-locking	Schwache Umkehrbarkeit Gute Selbsthemmung
$1^\circ < \beta < 3^\circ$	Irreversibilità piena	Full self-locking	Volle Selbsthemmung

## Estratto delle ISTRUZIONI D'USO E MANUTENZIONE Abstract of OPERATION AND MAINTENANCE INSTRUCTIONS Zusammenfassung der BETRIEBS- UND WARTUNGSANWEISUNGEN

I riduttori e i variatori di velocità non ricadono nel campo d'applicazione della Direttiva Macchine, art.1(2) e non possono essere messi in servizio finché la macchina nella quale devono essere incorporati, sia stata dichiarata conforme all'art. 4(2), all. II(B) delle Direttive Macchine 98/37/CEE/22,6,98 e, solo per l'Italia, al DL 459/24,7,96,

### Installazione

Accertarsi che il gruppo da installare abbia le caratteristiche atte a svolgere la funzione richiesta e che la posizione di montaggio sia coerente con quanto ordinato. Tali caratteristiche sono deducibili dalla targhetta d'identificazione apposta sul riduttore. Effettuare la verifica della stabilità del montaggio affinché non si verifichino vibrazioni o sovraccarichi durante il funzionamento,

### Funzionamento

Il riduttore può essere collegato per rotazione oraria o antioraria. Arrestare immediatamente il riduttore in caso di funzionamento difettoso o di rumorosità anomala, rimuovere il difetto o ritornare l'apparecchio alla fabbrica per un'adeguata revisione. Se la parte difettosa non è sostituita, anche altri componenti possono essere danneggiati con conseguenti ulteriori danneggiamenti e più scarsa possibilità di risalire alle cause,

### Manutenzione

Sebbene i gruppi siano provati con funzionamento senza carico prima della spedizione, è consigliabile non usarli a carico massimo durante le prime 20-30 ore di funzionamento affinché le parti interne possano adattarsi reciprocamente. I riduttori sono spediti già riempiti con olio sintetico a lunga durata e, se occorre sostituire o rabboccare il lubrificante, non mescolare oli a base sintetica con oli a base minerale,

### Movimentazione

In caso di sollevamenti con paranco, utilizzare posizioni di aggancio sulla struttura della carcassa, golfari ove esistenti, fori dei piedi o sulle flange, evitando tutte le parti mobili,

### Verniciatura

Qualora il gruppo subisca una verniciatura successiva, è necessario proteggere accuratamente gli anelli di tenuta, i piani di accoppiamento e gli alberi sporgenti,

### Conservazione prolungata a magazzino

Per permanenze maggiori di tre mesi, è consigliata l'applicazione di antiossidanti su alberi esterni e piani lavorati, e di grasso protettivo sui labbri dei paraolio,

### Gestione Ambientale del prodotto

In conformità alla Certificazione Ambientale ISO 14001, sono suggerite le seguenti indicazioni per lo smaltimento del nostro prodotto:

- i componenti del gruppo che vengono rottamati debbono essere consegnati a centri di raccolta autorizzati per i materiali metallici;

gli oli ed i lubrificanti raccolti dal gruppo devono essere smaltiti consegnandoli ai Consorzi Oli esausti;

- gli imballi a corredo dei gruppi (pallet, cartone, carta, plastica, ecc.) vanno avviati per quanto più possibile al recupero/riciclo, consegnandoli a ditte autorizzate per le singole classi di rifiuto,

Variable speed and reduction gearboxes are not part of the field of application of the Machinery Directive, art.1(2), and they must not be put into service until the machinery into which they are to be incorporated, has been declared in conformity with the provision of art.4(2), annex II(B) of Machinery Directives 98/37/CEE/22,6,98 and for Italy only, of DL 459/24,7,96,

### Installation

Check if the unit to be installed, is properly selected to perform the required function and that its mounting position complies with the order. The nameplate reports such information. Check mounting stability to run the unit without vibrations or overloads,

### Running

The unit may be connected for clockwise or counter-clockwise rotation. The unit must be stopped as soon as defective running or unexpected noise occur, remove the faulty part or return the unit to the factory for checking.

If the faulty part is not replaced, other parts can also be affected, causing more severe damage and making the identification of initial cause more difficult,

### Maintenance

Although the units are no-load run tested in the factory before despatch, it is recommended not to run them at maximum load for the first 20-30 running hours to allow the proper running in. The gearboxes are delivered already filled with long-life synthetic oil and, in case of replacement or topping, do not mix with mineral lubricants,

### Handling

When hoisting, use relevant housing locations or eyebolts if provided, or foot or flange holes. Never hoist on any moving part,

### Painting

Carefully protect oil seals, coupling faces and shafts when units are re-painted,

### Long-term storage

For storages longer than 3 months, apply anti-oxidants onto shafts and machined surfaces, and protective grease on oil seal lips,

### Product's Environmental Management

In conformity with Environmental Certification ISO 14001, we recommend the following to dispose of our products:

- scraped components of the units to deliver to authorized centres for metal object collection;
- oils and lubricants drained from the units to deliver to Exhausted Oil Unions;

- packages (pallets, carton boxes, paper, plastic, etc.) to lead into regeneration/recycling circuits as far as possible, by delivering separate waste classes to authorized companies,

Varvel-Getriebe und Variatoren fallen nicht unter den Geltungsbereich der Maschinenrichtlinien, Artikel 1 (2): Sie dürfen jedoch nicht in Betrieb gesetzt werden, bevor sich nicht Maschinen, in die sie eingebaut werden, mit Artikel 4 (2), Anhang II (B) der Maschinenrichtlinien 98/37/CEE/22,6,98, und (nur für Italien) DL 459/24,07,96, in Übereinstimmung befinden,

### Aufstellung

Vor der Aufstellung ist zu prüfen, dass die Antriebseinheit in bezug auf die Betriebsbedingungen richtig ausgewählt wurde und die Einbaulage mit der Bestellung übereinstimmt. Angaben hierüber sind auf dem Typenschild zu finden. Die Stützkonstruktion für die Getriebe ist so stabil auszuführen, dass keine Schwingungen oder Überlastungen auftreten, eventuell sind elastische Kupplungen oder Drehmomentbegrenzer zu verwenden,

### Inbetriebnahme

Die Antriebseinheit kann in beiden Drehrichtungen eingesetzt werden. Die Einheit müsst sofort angehalten werden, wenn ein unzulässiger Lauf oder unerwartete Geräusche auftreten. Das fehlerhafte Teil ist zu ersetzen oder die Einheit ist zur Überprüfung einzuschicken. Falls das fehlerhafte Teil nicht ersetzt wird, kann dies zu weiteren Schäden an anderen Bauteilen führen, was eine Feststellung der Ursachen sehr schwierig machen kann,

### Wartung

Obwohl die Einheiten vor der Auslieferung im Leerlauf getestet wurden, ist es ratsam sie in den ersten 20-30 Stunden nicht mit Vollast zu betreiben, um ein einwandfreies Einlaufen zu gewährleisten. Die Einheiten werden entsprechend den Angaben auf dem Typenschild mit synthetischem Schmierstoff Lebensdauer geschmiert ausgeliefert. Bei einem eventuellen Ölwechsel oder Nachfüllen darf der Schmierstoff nicht mit Mineralöl vermischt werden,

### Handhabung und Transport

Beim Heben und Transport ist auf standsichere Lage und sorgfältige Befestigung geeigneter Hebevorrichtungen zu achten. Bewegliche Teile dürfen nicht zum Anheben benutzt werden,

### Anstrich

Beim Erneuern oder dem zusätzlichen Aufbringen eines Anstriches sind die Dichtungen, Kupplungssitze und Wellen sorgfältig zu schützen,

### Langzeitlagerung

Die Einlagerung der Einheiten muss trocken und staubfrei erfolgen. Bei einer Einlagerungszeit über 3 Monate sind bearbeitete Flächen und Wellen mit Rostschutzmitteln zu besprühen. Dichtlippen sind mit Fett zu schützen,

### Entsorgung

In Übereinstimmung mit ISO 14001 weisen wir darauf hin, im Falle des Verschrottens die einzelnen Metallteile getrennt zu behandeln und Schmiermittel bei den befugten Stellen zu entsorgen. Verpackungen sollten soweit wie möglich wieder verwendet werden,
